WEB-BASED PAGING SYSTEM

The INFORMO IP LITE system is a paging system designed for all types of companies that need to contact staff via messages sent from any PC, Smartphone or Tablet connected to the network.

MAIN USES AND MARKETS

-  **Logistics**
Calls to truck drivers for loading and unloading goods
-  **Tourism**
Staff management for customer reception: calls from internal coordinators or directly from guests
-  **Business/Industry**
Contact staff on mobile devices from any company PC, Smartphone or Tablet

informoip lite

FAST AND EFFECTIVE COMMUNICATION

INFORMO IP LITE is the next generation staff call system that allows you to send text messages to all company portable Pagers. Sending can be to individual Pagers or via group communications (useful in case of emergency).

MULTIPLATFORM

Messages can be sent from any PC, Smartphone or Tablet connected to the company's LAN network through the dedicated web interface.

EXPANDABLE AND MULTI-SITE

INFORMO IP LITE manages up to 8 transmitters and can be used in multi-site mode, with centralised installation and network visibility for remote sites connected to the same LAN

MARKETS AND APPLICATION FIELDS

Logistics

- Call truck drivers for loading and unloading goods
- Registration, assignment and distribution of Pagers to drivers: allows vehicles to wait their turn, even in remote areas
- A message is sent to the driver through the web page with details of the free slot

Tourism

- Immediate call to customer reception staff from any PC, Smartphone or Tablet on the premises
- Ideal for medium-large tourism businesses whose service is based on communication between staff
- Predefined or variable message from internal coordinators or directly from guests with exact indication of the task to be performed

Business/Industry

- Staff coordination and ease of contacting resources
- Sends messages and instructions to employees from any PC, Smartphone or Tablet within the company
- Coverage of large areas and real-time coordination
